

Preserve the Commons (PTC) is holding a FREE Information Event

Microbiologist and Cancer Researcher, Richard C. Honour, PhD, is returning to Yelm. Dr. Honour has spent decades researching and testing human sludge samples in Washington State and beyond.

Class A biosolids are being spread in our Yelm and neighboring communities under the pretext that they are safe. They are **NOT** safe. Class A sludge is being sold as fertilizer and sprayed on the land and does not require any permits. Learn the truth as uncovered by this expert who will show us WHAT'S REALLY IN human toxic SLUDGE!

This threat affects us all. Inform your neighbors and friends to attend this FREE presentation delivered by an engaging and knowledgeable speaker.
Don't miss this rare opportunity!
